

Assignment 6 – Self Assessment

My individual contributions to this project were the main functions of the web application. Basically, further designing and developing the application and the beginning steps in the formulation of the project and the goals and tasks associated with them. I did build upon the skills that I identified in the initial assessment, not as much as I would have originally wanted, but I did. In terms of how I did that, more specifically working on the actual technical part of the project taught me things that I didn't know before and helped me build upon the little knowledge I had about things like react, JavaScript, html, CSS, etc.

Overall, during the time of the project, I learned about what it means to work with a team and delegate tasks fairly depending on the situation of each individual on the team. I learned more technical skills in terms of the languages that I had to use for the actual project, and I learned time management skills. Successes were that we were able to get the project done and even though the execution was not at the level we wanted, the concept and next steps were solid and selling the people at the expo and the judges was something that I was proud of. Some obstacles were time management. Individually and as a team, we did not manage our time the best at all.

Our group accomplished completing the actual project and getting it to a point where the judges thought it was a good idea/ concept and could be used in the future. I learned that in a group it's important to be strict and stern about deadlines. Some people won't take it as seriously as you do, but it's important to emphasize how important every aspect of the goal is. The aspects of teamwork that were successful were everyone's roles on the actual team. Everyone did their roles really well, whether that was the actual technical application or speaking skills and presentation skills when it came to actually presenting at the expo. Some things we didn't do well with were consistent communication and time management.

Everyone on the team contributed fairly to the project in my opinion. I think everyone held their weight and did the best they could with the time and resources they had in relation to the project. Everyone on the team deserves recognition for the work that they did on the project.
