At least twice a week, specific times to be determined soon

Team Roles

1. Al Ayoola - Software Engineer / Project manager
2. Stephon Mensah - Software Engineer
3. Pacific Mugisha - Software Engineer
4. Tamera Meadows - Software Engineer

Project Focus

Emotion-based Music Playlist Generator

Description: The project aim is to develop a web application that generates personalized music playlists based on user-input emotions, keywords, emojis, or facial expressions. The application will employ emotion analysis techniques to understand the user's current emotional state and recommend music that matches their feelings. Users will have the option to input a keyword (e.g., happy, sad, energetic), select an emoji representing their mood, or utilize facial recognition for emotion detection.
